

I am delighted to say that Spring has sprung! April seems to be coming in like a lamb! It is so beautiful to see the buds on the trees and listening to the birds singing! It sure has been a long winter! I would like to take this opportunity to say that we are very excited to be communicating with our patients via our Newsletters. It is a wonderful way to keep you informed of what 'we are doing' and 'what's new' at our practice.

Did you know that April is both Cancer and Oral Awareness month world wide? I am thrilled to advise you that the clinic has recently purchased a VELscope vx Intraoral Scanner. This is a device used to detect oral cancer and malformations. It is a non-invasive procedure and takes only minutes to perform. We feel that this is a priority to our practice and it is very convenient for our patients.

This past weekend, I attended the Technorama Conference in Markham, which is an annual general meeting for all of the Denturist's in Ontario. At this meeting, we learned about new and improved techniques and also got a chance to meet our vendors where they introduced new products. It is important to us to keep up-to-date with continuing our education.

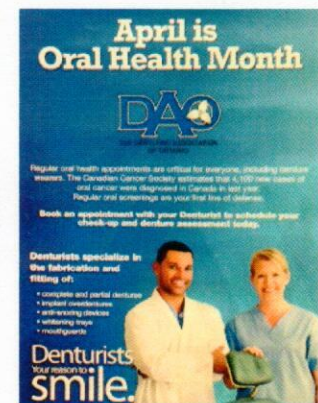

Thank you for the incredible feedback that I have received from our first Newsletter. I am pleased to say that it was very positive. We appreciate your comments and would like to encourage you to be involved. If there are any specific topics that you would like to learn more about, we encourage you to let us know.

I look forward to seeing you in the near future.

Kim

Kim Dadswell, Denturist

## The Importance of a Recare Visit

After a long cold winter, we welcome spring and start to prepare for the warmer months ahead! The days are getting longer and the snowbirds are returning home! Now is the perfect time to get your dentures checked.

At a Recare visit, we check the integrity of your denture, i.e. make sure that it is fitting nice and snug and there aren't any hairline cracks, etc. We also check the esthetics, stability and the bite. Oral hygiene procedures and denture care are reviewed as well as a professional cleaning and polishing of your dentures.

We also check for oral cancer and abnormalities that aren't visible with the naked eye in ordinary lighting using the VELscope vx Intraoral Scanner. It is a non-invasive procedure that helps ensure that the delicate tissues of your mouth are healthy and protect you from oral disease. Screening should be performed annually on all adults. They are painless, quick, inexpensive and can be life saving.

Take control of your health and book your appointment today. Think of it as a spring maintenance or tune up for your dentures!

## Denture Care Tips

Did you know that you should keep your dentures moist when you aren't wearing them? This will keep them from drying out and losing their shape. Store your dentures in a denture cleanser soaking solution or in water. Never place your dentures in hot water as this can cause them to warp and change its shape.
