

## A Word from Kim

It's hard to believe that November is here already! Mother Nature was kind enough to give us a gentle reminder of what is yet to come...ugh! I don't know if I will ever be ready for the freezing cold and snowy weather! In the mean time, I am enjoying this beautiful weather that we are having which is absolutely perfect for our Snowbirds who are busy getting ready to head south.

If you are a Snowbird and are busy making preparations to migrate south, then please don't neglect your dentures. We would like to remind you of the importance of having a check up of your dentures before you leave. For the month of November, we are offering 10% off of any denture service to our Snowbirds. At this appointment, we check the integrity of your dentures to make sure that you are happy with the fit, stability and bite. We also check to make sure that your dentures are snug and that there aren't any hairline cracks, chipped teeth or broken clasps that require attention. Should your denture require a repair then we can restore it in our onsite lab quickly and cost effectively. We will also professionally clean and polish your dentures at this visit. There would be nothing worse then being down south and have something go wrong with your dentures. Make it a priority to be preventative and have your dentures checked to avoid any possible mishaps! Ensure success of your denture, while maintaining good oral health and a sparkling smile!

In honour of Remembrance Day, we salute our Veterans. As a way of saying 'thank you' for your services we would like to offer both retired and active duty service members 20% off of any denture service for the month of November. Take advantage of this special savings and call to book your appointment today!

I look forward to seeing you in the near future.  
Kim

## Partial Dentures

### What to keep in mind when choosing partial dentures:

A removable partial denture is usually made to replace one or more teeth and is customized to a patient's specific requirements. It can also restore a person's natural appearance and greatly improve the ability to eat and speak clearly. This treatment is an effective and economical way of restoring proper chewing and a pleasing smile. Partial dentures can be fitted as teeth are lost or removed and can help to preserve the position and function of the remaining natural teeth.

### The Importance of Partials

When teeth are lost a space is created which the teeth on either side tend to tip into and fill. The bite then alters when teeth move from their proper position and if left unchecked this can lead to further tooth loss. By filling the spaces with partial dentures, remaining teeth are prevented from moving. The dentures provide a surface to bite on, restoring the ability to chew properly. Your smile is restored by replacing missing teeth, which are colour matched to enhance your natural appearance.

### A Variety of Options

There are different types of partial dentures, made with a variety of fasteners. Partial dentures restore missing teeth by using some natural teeth for hold and support. Combined tooth and gum support provide effective function so that a complete bite is restored even when many teeth are missing. Properly designed partial dentures do not harm remaining natural teeth. In fact, a partial denture may help maintain the position of your natural teeth by providing them with additional support. With newer designs, materials and techniques, partials are more comfortable than ever before.

With a partial denture, you'll look better, feel better and chew better!

## Denture Tips

Always use a denture cleaner to clean dentures. Regular toothpastes are not recommended for daily use. They may abrade and contribute to the loss of luster. It is important to clean your dentures as you would your natural teeth.

We sell Nova Dent denture cleaner which works very well to clean dentures. One box is a 2 months supply and sells for only \$10.00. Stop by our office to get your supply today.
